

YouTube Data API

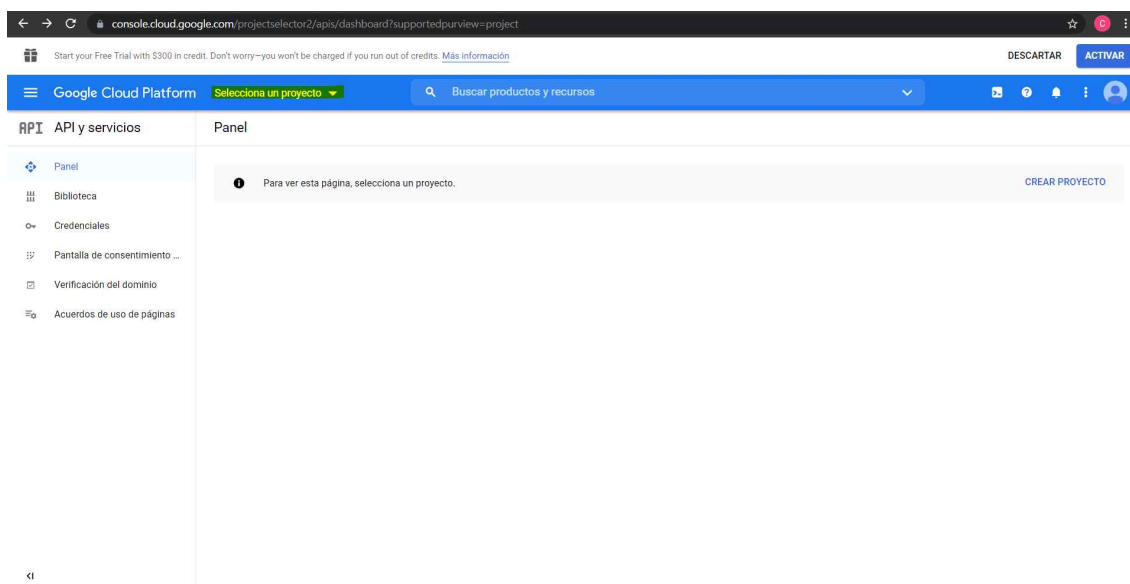

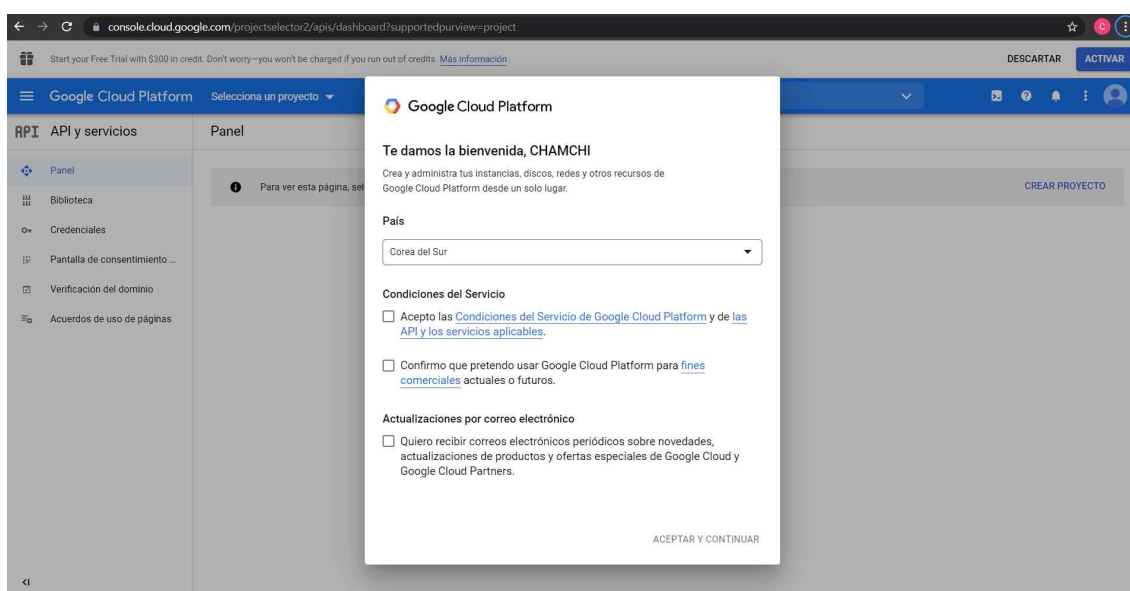

The most effective way to collect YouTube comments is to use the YouTube Data API provided by Google. To do this, you must first register the Youtube Data API as a developer.

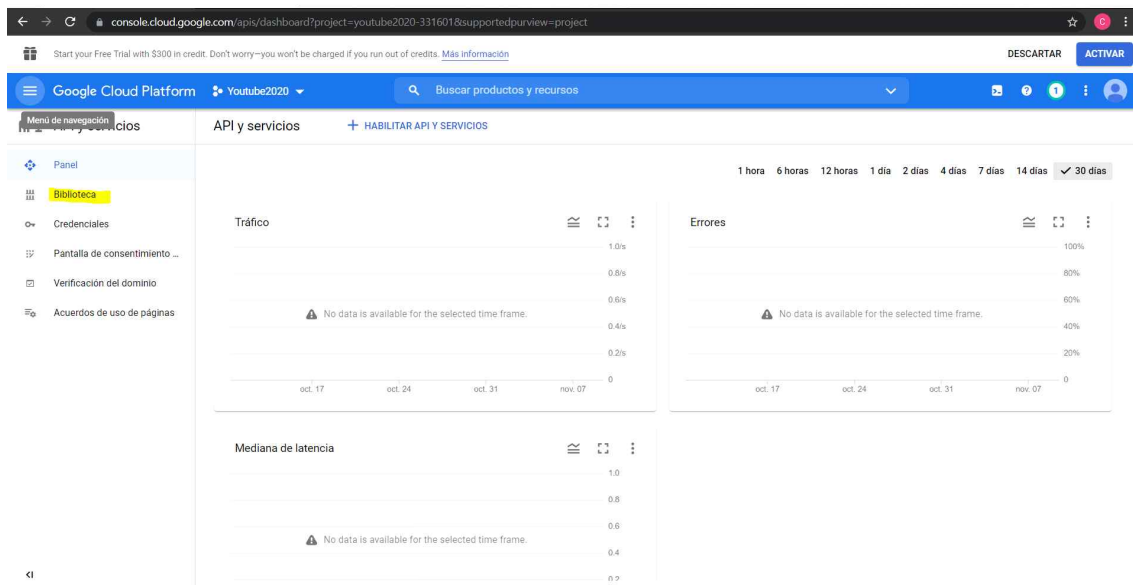

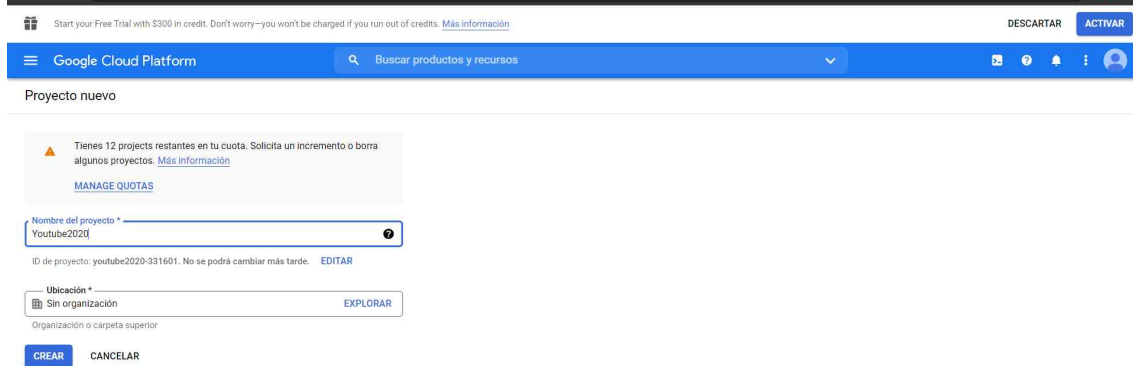

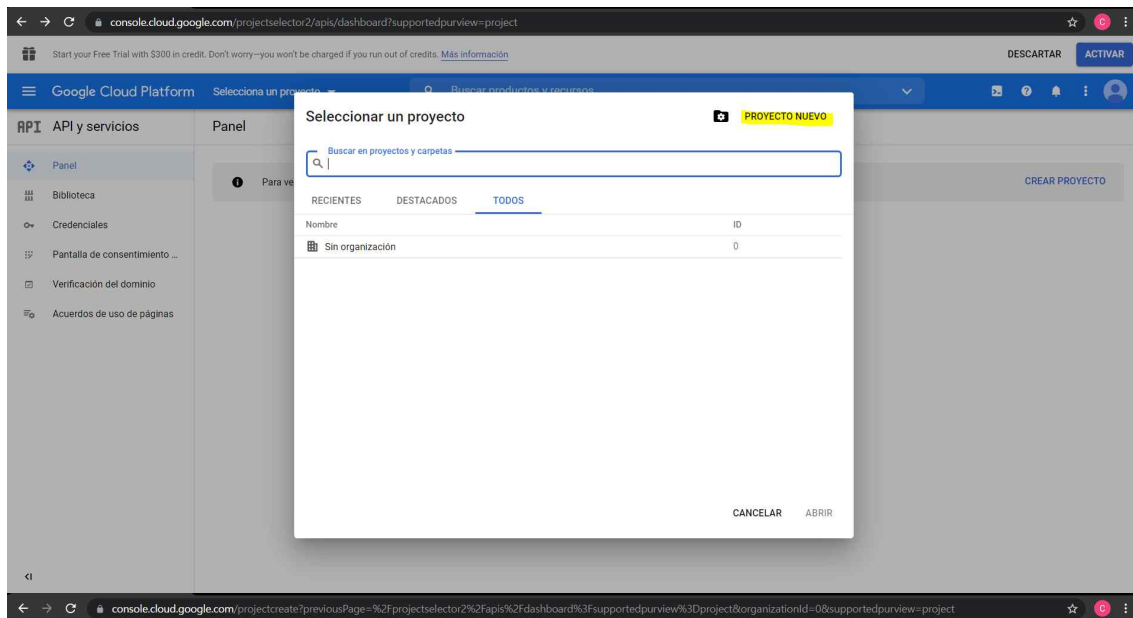

Note: If you use the API for personal use, you will rarely exceed your quota, but if you use the API for the purpose of providing public services, you should check your API usage and Google's billing policy.

1. Create a Google API project

After logging in to your Google account, access the Google API console and create an API project. If you have an existing API project, you can use it as it is.

Schedules reporting jobs containing your YouTube Analytics data and downloads the resulting bulk data reports in the form of CSV files.

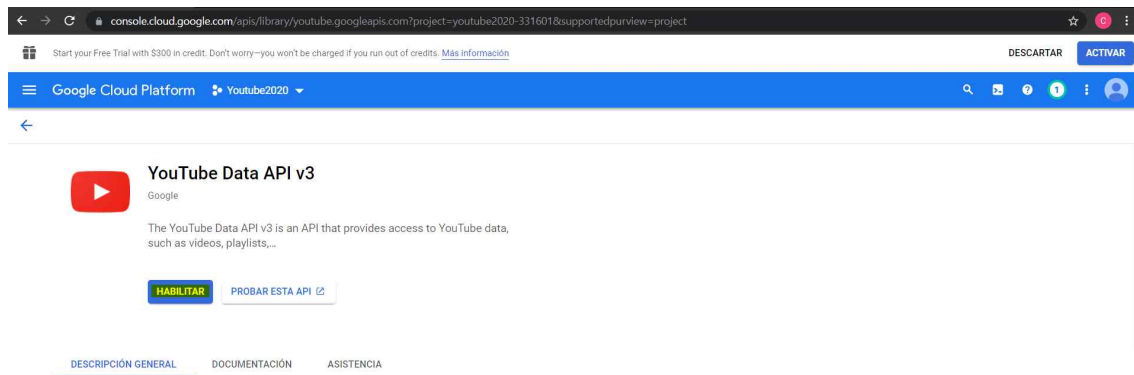

YouTube Data API v3

Google

The YouTube Data API v3 is an API that provides access to YouTube data, such as videos, playlists, and channels.

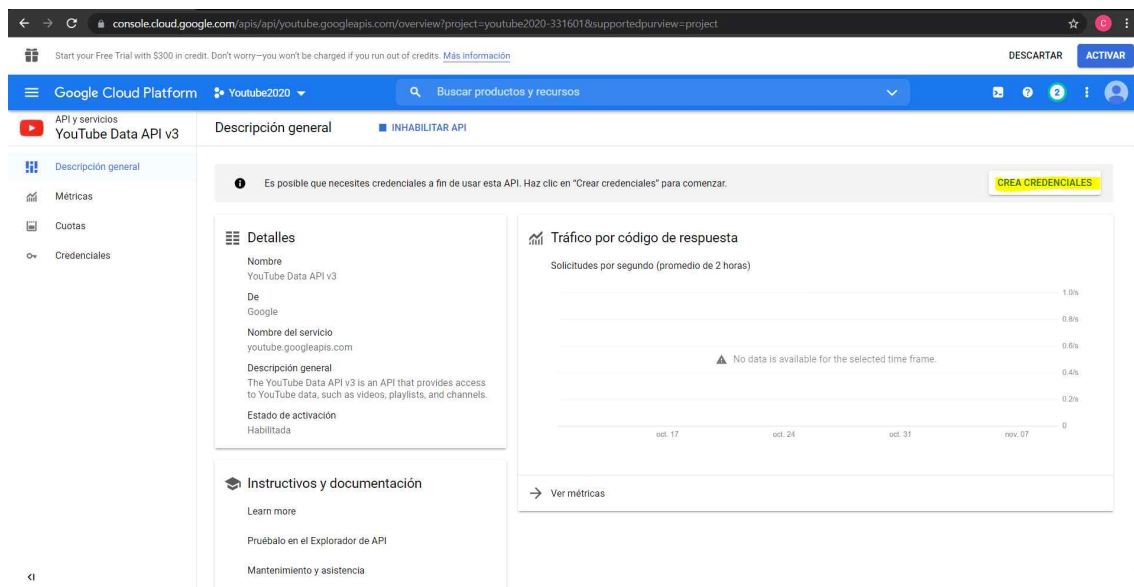

YouTube oEmbed API

Google

2.Enable YouTube Data API

In the created project, click the library on the left to move to the library search screen. Enter "youtube" in the search bar and click the found YouTube Data API v3. Then click the "Enable" button on the screen that is moved to enable YouTube Data API v3. Activation takes about 1 minute.

3.Issue API key from user authentication information

Click "Create user authentication information" that appears when you click the "Use" button on the API activation screen to get an API key. To obtain an API key, set the API to be used, API call platform, and purpose data as shown in Figure 4, and add user authentication information. Finally, when you click the "What kind of user authentication information is required?" button, an API key is issued.

In the future, when using the YouTube Data API, the issued API key will be used. Since the API key is like a kind of password for using the API, be careful not to expose it.

First, in the question of which api to use, you must select "youtube data api v3", and for the data you want to access, you must select "public data". And you need to select "other ui" for where to call the api.

After that, you can check the api key in the panel panel.

The screenshot shows the Google Cloud Platform console interface. The top navigation bar includes the Google Cloud logo, the project name 'Youtube2020', and a search bar. The left sidebar contains a menu with 'API y servicios' selected, showing options like 'Panel', 'Biblioteca', 'Credenciales', 'Pantalla de consentimiento...', 'Verificación del dominio', and 'Acuerdos de uso de páginas'. The main content area is titled 'Credenciales' and includes a '+ CREAR CREDENCIALES' button and a 'BORRAR' button. Below this, there is a warning message about OAuth consent screen configuration. The 'Claves de API' section contains a table with one entry: 'Clave de API 1' created on '9 nov. 2021' with 'Ninguna' restrictions. The 'ID de clientes OAuth 2.0' section is empty. The 'Cuentas de servicio' section is also empty. A 'Code copied to clipboard' notification is visible at the bottom.
